

## Table des matières

Enregistrer un état lumière dans un événement .....	3
Éditer un événement lumière .....	3

The screenshot shows a lighting control interface. At the top, there are three rows of channel information:

- Row 4: 3/sur texte
- Row 5: 4/p21 chariemesyeux
- Row 6: /p25 Ah le grand quai

Each row has associated input/output data and a 'base' label with a green arrow. Below this is a control panel with tabs for 'Mixer', 'Lumière', and 'Évènement'. The 'Lumière' tab is active, showing a grid of 48 channels (4 columns by 12 rows). The grid contains numerical values for each channel, with some cells highlighted in blue. A blue button labeled 'Edition Aveugle' is visible on the left side of the grid. On the right side of the grid, there is a control menu with buttons: Channel, at, atFull, atZero, ALL, Invert All, Thru, Clear, - chan, + chan, -%, and +%.

Edition en mode aveugle.

Pensez à désactiver le mode édition Aveugle dès que vous avez terminé.
